

**ABSTRACT**

METHOD AND APPARATUS  
FOR  
VEHICLE DISABLEMENT AND  
INSTALLATION OF SYSTEM THEREOF

Means for disabling an automobile by causing an on-board computer to disable  
10 the ignition system thereof. A radio receiver provides a signal to the on-board  
computer through an existing port (e.g. diagnostic port or ignition interface port).  
The on-board computer disables ignition function through supplanted firmware  
that recognizes the status of the signal received from the radio receiver.  
Removal of the radio receiver also disables the ignition system. The entire  
15 system is installed during government required inspections (e.g. a smog check).
